ABSTRACT

DESCRIPTORS

Profiles on higher education for fiscal year 1985 are presented for the United States, each of the 50 states, and the District of Columbia, with attention to state involvement, support, and performance in higher education. Each state is indexed to a national average and ranked on selected statistics, based on data collected through the Higher Education General Information Survey. The 12 statistical tables cover enrollment, full-time faculty, revenues, expenditures, degrees, and other formal awards conferred. Among the tables are statistical indicators of the status of higher education in a particular sector. The indicators adjust for the size of a sector where size is alternately defined as the number of full-time equivalent students or the number of full-time faculty. Four types of statistics are presented: actual counts (of individuals or amounts of money); percentage distributions, ratios (means and indicators), and indexes. Appended are information on data sources, definitions of terms, institutional classifications, and listings by state: (SW)

ons supplied by EDRS are the best that can be made from the original document.

Foreword

State Higher Education Profiles: 1985 (also known as SHEP 1985) is the Center for Education Statistics first profile report on higher education for the Nation; each of the fifty States, and the District of Columbia. It presents various statistics and indicators that can be used to address a myriad of questions relating to State involvement, support, and performance in higher education.

SHEP 1985 was developed by Center staff after consulting extensively with a working group of State higher education finance officers. It is based on the model developed by Kent Halstead, Marilyn McCoy, and Melodie Christal in their publication, Higher Education Financing in the Fifty States. Like its predecessor, SHEP 1985 indexes each State statistic to a national average and ranks States on selected statistics. Unlike its predecessor, however, this report relies almost entirely on data collected by the Center through its Higher Education General Information Survey (HEGIS) and is limited to data for one fiscal year.

SHEP is planned as an annual publication of the Center, and, while this edition appears in September 1987; succeeding reports will follow the end of the fiscal year more expeditiously. Moreover, as the HEGIS evolves into the Inte-

grated Postsecondary Education Data System (IPEDS) in 1987 and as the Center for Education Statistics broadens its perspective on postsecondary education through individual-based survey systems, the scope of SHEP will expand in both its coverage of institutions and its statistical content.

In recognition of the responsibility of presenting individual State data and State ranking tables, the introduction to SHEP 1985 uggests several general cautions in the use of the data for comparative purposes and specific caveats are presented for each State's data as necessary. Users should be aware of these cautions in interpreting the data.

We hope that anyone with at interest in higher education will find this volume informative and useful. To assure that future editions of *State Higher Education Profiles* will have even greater value for the postsecondary education community, we welcome recommendations for improving the format or analysis.

Education Statistics Division

Roslyn Korb Chief, Special Surveys and Analysis Branch

Acknowledgments

Many individuals made significant contributions to this report, and the authors gratefully acknowledge their efforts. The State Higher Education Executive Officers (SHEEO)/CES Network Advisory Committee for Fiscal Year 1986, including Gary Barnes (North Carolina); Molly Broad (Arizona), C. Gail Norris (Jtah), Robert Wallhaus (Illinois), and John Wittstruck (SHEEO/CES Network) provided suggestions for the broad content of this report. An advisory group of current and former State Higher Education Finance Officers composed of Brenda Albright (Tennessee), Dennis Curry (Washington), Edward Grose (West Virginia), Lucie Lapovsky (Maryland), Tom McCord (New York); and John Taylor (New York) took part in the initial detailed planning and design of this report. Lucie Lapovsky, Brenda Albright; and John Wittstruck reviewed the tables and interim drafts of this report; and Lucie Lapovsky served on the final technical review committee.

In addition, critical technical review was provided by CES staff members Charles Cowan, Thomas D. Snyder, and Mary K. Batcher. Editorial review and publication support was provided by Lance Ferderer, Mark Travaglini, and Phil Carr of the Publications Branch of the Office of Information Services. The staff of the General Surveys and Analysis Branch in the Postsecondary Education Statistics Division of CES supervised the collection and file construction of the 1985 HEGIS data used in this report, and Josie Y. Shell, Samuel D. Barnhart, Sindy S. McGill, and Patricia Brown provided clerical support.

Finally, this report would not have been possible without the creative and insightful work done by Kent Halstead, Marilyn McCoy, and Melodie Christal in their five editions of *Higher Education Financing in the Fifty States*.

Introduction

Using the Data

This report offers a comprehensive look at higher education in the United States. It contains 12 statistical tables for each State, the District of Columbia and the U.S. covering enrollment, full-time faculty, revenues, expenditures, and degrees and other formal awards conferred. Among these tables are statistical indicators of the status of higher education in a particular sector. The indicators adjust for the size of a sector where size is alternately defined as the number of full-time equivalent (FTE) students or the number of full-time faculty. Several indicators are also adjusted for the size of the population served, defined as the number of individuals 18, years of age or older. The indicators should help educators gauge higher education from several perspectives.

Additionally, each State-level statistic is accompanied by an index that is the ratio of the State statistic to the national average. These indexes put each State's report into a common context and provide a metric on which States can be ordered. State ranking tables present such an ordering by selected statistics. In examining the data for each State; the reader is urged to consider all of a State's data and not just focus on one or another specific measure.

While the indicators adjust for the size of a sector, many other generic factors are not accounted for in this report. Many of these make comparisons among States tenuous at best, particularly for the revenues and expenditures (finance) data. Among these generic factors are geographic price differences, economies of scale, the mix of academic programs in a State, the State's population characteristics, and the wealth of the State—however defined. Differences among States in accounting practices and funding principles such as the State's treatment of capital expenditures, retirement-system payments, and student financial aid also contribute to the problems with interstate comparisons. Furthermore, prior to release of these data, each State higher education finance officer was asked to review his or her State's data to provide comments that would explain any anomalies in them or that would make the State's data even less comparable to data from other States. Except for editorial changes, these comments appear as received by CES in the notes preceding presentation of the State's data. They should be read carefully.

Comparisons among different types of instructions—particularly among the 4-year and above and 2-year institutions—should also be approached cautiously

since the data collected through CES' Higher Education General Information Survey (HEGIS) may not reflect one institutional sector as appropriately as another.

To understand the data in this report, the reader should pay special attention to the definitions of specific terms used in this report. (They appear in Appendix B.) Finally, it must be noted that the statistics on higher education in this report are, for the most part, input measures rather than measures of the outcomes of higher education. They represent the result of much planning, numerous deliberations on providing services in light of competing demands for limited resources, and vastly different perspectives on the objectives of higher education and the needs of students. All of these factors must be considered when interpreting the data presented in this report.

The Data and the Approach to the Analysis

This report describes higher education in the 1985 fiscal year (July 1, 1984—June 30, 1985). Although 1985 is the most recent year for which national data on all aspects of higher education are available, they are two years old as of this writing and should be viewed in that context. The analyses in this report are based almost entirely on information reported to the Center for Education Statistics through its Higher Education General Information Survey (HEGIS). There are two exceptions to this: the appropriations data; and the populations statistics used in ranking table Y. (The source and reliability of these data are presented in Appendix B.)

HEGIS collects data on institutional characteristics, enrollment, finance, full-time faculty, and earned degrees and other formal awards. It is a census in that it collects these data on the universe of institutions whose accreditation is recognized by the U.S. Department of Education. While this universe may change from one fiscal year to the next, it is consistent within each fiscal year. The institutional universe for the statistics in this report was a subset of the HEGIS universe. It includes only non-profit institutions in the 50 States and the District of Columbia that are either publicly controlled or are privately controlled. Institutions in the HEGIS universe, that are operated for-profit (proprietary), U.S.

ERIC

ix

service schools and military academies, and institutions in outlying areas were excluded.

The data collected through the HEGIS, for any one year, represent two distinct time periods. The institutional characteristics, enrollment, and faculty data represent an institution at one point in time, the fall of the school year; the sinance and earned degree data cover the entire 12-month period of the fiscal year. Therefore, although fall data are used in conjunction with 12-month data in this report, readers should be cognizant of the differences in time periods covered.

This report presents four types of statistics—actual counts (of individuals or amounts of money), percentage distributions, ratios (means and indicators), and indexes. Counts were arrived at by summing individual institutional reports within type and control of institution. Percentage distributions were calculated by summing institutional level data in the various HEGIS survey component reporting categories then dividing those sums by the totals for a particular type and control of institution. Ratios were calculated by dividing counts of variables (the numerator) by counts of variables (the denominator). Indexes were derived by computing the ratio of a State statistic to the National statistic, and multiplying that ratio by 100.

HEGIS requests data on all its components from every institution in the HEGIS universe. As might be expected, however, not all institutions respond to all data requests. As a result, the set of reporting institutions for any one survey component may differ somewhat from the set of reporting institutions for another survey component. That holds true for this report. Counts and percentage distributions are based on a single survey component so that all institutions reporting data (or for whom data could be imputed on that component) were used in the presentation. For ratios that use data from two different HEGIS survey components, only those institutions that had reported data (or imputed data) for both components were used in the analysis. Therefore, the reader may find it problematical to derive the ratios presented in this report from the relevant counts.

It should also be noted that in the State ranking tables, States with equal indexes were assigned the same rank. Because indexes were rounded to the nearest whole number, States with different ranks but obstensibly equal indexes are an artifact of the rounding convention used. States for which a particular statistic was not relevant were assigned an index of 0 for that statistic in the State ranking table and are listed alphabetically at the bottom of the table.

Chapter I

The National Profile

The National data presented in this chapter formed the basis for the indices derived for each State level statistic. It should be noted that both the National data on higher education and data on each State's higher education are presented uniformly in a series of the same 12 tables. Therefore, a description of the National data should provide a foundation for examining and understanding the State-level data that are the major focus of this publication.

Fall Enrollment

HEGIS collects data on part-time students in two ways—the actual number of part-time students and the full-time equivalency of part-time students. (For a precise definition of the full-time equivalence of part-time students see Appendix B.) This report uses the full-time equivalence (FTE) of students (the number of full-time students added to the full-time equivalence of part time students) as its measure of enrollment since the FTE of students tends to have a better correspondence to other institutional measures than does the actual count of full- and part-time students.

Tables 1 and 2 present different aspects of FTE enrollment in higher education in the 1984-85 school year. In the fall of 1984 there were 8.7 million FTE students attending higher education institutions, 83 percent were undergraduates, 8 percent were graduate students, and 3 percent were enrolled in a first-professional program. As Table 1 indicates, private institutions tended to enroll a higher proportion of postbaccalaureate students than public institutions, but it is evident from Table 2 that the overwhelming majority of FTE students were enrolled in public institutions (76 percent in publics vs 24 percent in privates). Across the 50 States and the District of Columbia, the proportion of FTE students in public institutions ranged from a high of 100 percent in Wyoming to about 40 percent in Massachusetts (State ranking Table A).

About 71 percent of all FTE students were enrolled in 4-year and above schools, primarily because 77 percent of all full-time students were in schools with at least one 4-year program. Public 2-year schools accounted for over half (50.7 percent) of the FTE of part-time students, indicating that extremely high proportions of students in 2-year institutions attended part-time (Table 2).

In 1984, there were a total of 3,107 public and private, nonprofit higher education institutions in the 50 States and the District of Columbia (Table 3), split about evenly between those under public control (48 percent) and those under private control (52 percent). Public institutions tended to be larger on the average than private institutions, with 4-year public institutions averaging about 6,000 more FTE students than private 4-year schools and public 2-year institutions being almost seven times as large as private 2-year schools. It is interesting to note in Table 3 that 5 percent of the Nation's population of individuals 18 years of age and older were enrolled in higher education-3.8 percent in public institutions and 1.2 percent in private. The proportion of the adult population enrolled in higher education varied considerably across States. In the District of Columbia, for example, 11.9 percent of the adult population were enrolled whereas, in Nevada, only about 3 percent of the adult population attended a higher education institution (State ranking table B). However, since population counts are based on residency status, States with a large number of non-resident students may have artificially high values on this index.

Faculty

Over 388,000 individuals were employed full-time and had faculty status in higher education in the fall of 1984 (Table 4) with the overwhelming majority (86 percent) on 9-month contracts. Seventy-four percent of the total full-time faculty were employed in public institutions and 26 percent were employed in private. Of the total number of full-time faculty, 78 percent taught in 4-year and above institutions—a proportion consonant with the concentration of full-time students in 4-year schools.

Seventy-five percent of the full-time faculty held professorial rank, with the highest proportion (30 percent) of faculty at the highest rank, that of full professor. Four-year schools, both public and private, tended to follow the same pattern with respect to the rank of their full-time faculty, in that the largest number of faculty were at the highest ranks. In 2-year institutions, however, only one-third of the total full-time faculty held any professorial rank.

The average salary of a full-time faculty member in 1984 was \$31,200, but of course this varied by the rank of the faculty member, the length of contract (9-month or 12-nonth), control of institution and the level of the institution. As the State ranking tables (Table C) indicate, the average faculty salary also varied considerably by State.

Revenues

Table 5 presents the total educational and general revenues generated by higher education institutions and the sources of these revenues. Across all institutions, more than 68 percent of all revenues for higher education institutions came from either State and local appropriations (39.6 percent) or tuition and fees paid by students (29 percent). As might be expected, however, the relative importance of these two sources of revenues differed greatly for institutions under public or private control. Public institutions received 58 percent of their revenues from State and local appropriations—and 2-year public institutions received almost 69 percent of their revenues from this one source. Private institutions received over half their revenues (52 percent) from tuition and fees. The next largest single source of revenues (after State and local appropriations and tuition and fees) was Federal grants and contracts (exclusive of Federal Pell grants), accounting for 11 percent of the total revenues of all institutions and almost 14 percent of the revenues of private institutions.

It is interesting to note that 4-year doctoral institutions differed markedly in their funding patterns from other 4-year schools. Both public and private doctoral institutions with medical schools had a heavier reliance on Federal sources of revenues and less reliance on tuition and fees and State and local appropriations than other 4-year institutions. Of interest also is the role of private sources in funding higher education. In all 4-year schools, private sources of revenues (private gifts, grants, and contracts) accounted for 8 percent of revenues—but in private 4-year schools, they accounted for 13 percent. At the same time, income from endowments accounted for another 8 percent of private institutions revenues.

The State ranking tables on the percentage of total revenues by source of revenue (Tables G and H) indicate that among States and in the public sector, State and local appropriations accounted for between 21 percent and 74 percent of all institutional revenues. In the private sector, tuition and fees provided over 70 percent of total revenues to private institutions in six States and less than 40 percent of revenues in five States.

The level of Federal support for higher education may be seen in Table 6. Including Pell grants, about 15 percent of total revenues to higher education institutions came from Federal sources, either through direct appropriations (6.9 percent), grants and contracts (73.4 percent) or Pell Grants (19.6 percent). Not

surprisingly, of the three major Federal mechanisms for supporting higher education, Federal grants and contracts are of decreasing importance, and Federal student aid is of increasing importance as the level of institution changes from 4-year doctoral degree granting to 2-year institutions. Table 6 is not a complete picture of all Federal support for higher education, however. In addition to the Federal support that flows through institutional accounts and is reported on institutional finance reports, the Federal government also provides financial aid directly to students through Guaranteed Student Loans and other programs. Revenues from these Federal sources are included in the institution's tuition and fees revenues and cannot be presented separately.

Expenditures

It is often stated that the three major functions of higher education are instruction, research, and service. The pattern of educational and general expenditures presented in Table 7, to some extent, reflect this maxim. Higher education institutions expend more money on instruction than on any other single function. In fact, public 2-year institutions spend more on instruction than on all other functions combined.

Appropriately, perhaps, the proportion of expenditures for research varies by the level of institution, ranging from about 20 percent in doctoral degree granting institutions with medical schools to about .2 percent in 2-year public institutions. The level of support for public service is quite low (4.2 percent of total expenditures) overall, however, and does not vary greatly by either level or control of institution.

Institutions of higher education tend to place a 'leavy emphasis on providing student-related services as evidenced by their expenditures. Over half (50.5 percent) of the total expenditures are accounted for by expenditures for instruction, libraries, and student services, while scholarships and fellowships provided to students (exclusive of Pell grants) account for another 5 percent.

From Table 7 it may also be seen that a relatively high proportion of total institutional expenditures is allocated to support the institution, rather than its mission, when such specific expenditures as academic and institutional support, and operation and maintenance of plant are combined.

Financial Indicators

Tables 8 and 9 adjust selected sources of institutional revenues and selected functions of institutional expenditures for the size of the institution and for the size of the population served. Institutional size is defined alternately as the number of FTE students or the number of full-time faculty and population is defined as the number of individuals 18 years of age and over.

In looking at Table 8 it may be seen that when the two primary sources of institutional revenues.—State and local appropriations and tuition and fees—are combined, private institutions receive slightly more per FTE student than public institutions (\$5,530 for publics and \$5,926 for privates), although the amounts are strikingly similar. It is also clear from Table 8 that 2-year institutions have the lowest revenues per student from these two sources with public 2-year institutions receiving only about two-thirds (64 percent) of the average revenues per student of all publics, and private 2-year institutions receiving only 55 percent of the average revenues per student of all privates.

The trade-off between revenues per student from tuition and fees and State and local appropriations for public and private institutions is consistent with expectations. This trade-off is evident, however, even within a sector among some of the States (State ranking tables N and O). That is, States whose public institutions average high revenues per student from tuition and fees tend to have relatively low revenues per student from State and local appropriations. Similarly, within the private sector, States whose private institutions have relatively low revenues per student from tuition and fees, tend to provide at least some State and/or local support to their private schools.

As mentioned previously, private institutions have slightly higher revenues per student than publics when tuition and fee revenues and State and local appropriations are combined. As Table 8 also indicates, private institutions have still another significant source of revenues (\$2,260 per student) that is very minimal in the public sector (\$330 per student)—that is, income from private sources including revenues from private gifts, grants and contracts and endowment income.

Institutions received \$246 per FTE student from Pell grants and a total of \$1,159 per FTE student from all Federal sources. The average size of Pell grants did not vary much by control or level of institution, but the amount of Federal grants and contracts per FTE student was much higher in doctoral level institutions with medical schools, particularly private doctoral institutions. Revenues per FTE student from Pell grants did vary considerably by State, however, probably reflecting both the wealth of the population in the State and the costs of attendance in that State (State ranking Table S).

As Table 9 indicates, private institutions spend more for instruction on a per FTE student basis (\$3,958) than public institutions (\$3,031)—except for 2-year schools. On all other student-related expenditures (libraries, student services, and scholarships and fellowships) private institutions also spend more per student than public institutions; and they spend more per student on support functions—both academic and institutional support than do public schools.

On a per full-time faculty basis, private institutions spent more on research per faculty member than public institutions, except for baccalaureate and 2-year schools (Table 9). On the other hand, they received more from both Federal grants

. \.

and contracts per full-time faculty and private sources (Table 8) than public institutions. The level of support (revenues) per full-time faculty from Federal grants and contracts was widely disparate among the States in both the public and private sectors, ranging from about \$7,000 to \$38,000 in public institutions and from \$1,300 to \$93,000 in private institutions (State ranking Table Q).

Degrees and Other Formal Awards Conferred

Tables 10, 11, and 12 present data on the degrees and other formal awards by program that were produced by higher education institutions in the 1985 fiscal year. They are presented in this report to provide some indication of the outputs of the higher education system and to offer some context in terms of programs and mix of programs for examining input measures (enrollment and revenues) and resource measures (faculty and expenditures).

In 1984-85, the Nation's higher education system produced more than 1.9 million degrees—half of which (51 percent) were baccalaureate degrees and almost 80 percent of which were undergraduate degrees (bacalaureate and less than 4-year degrees). Postbaccalaureate degrees (master's, 15 percent; doctoral, 2 percent; and first professional degree, 4 percent) complete the distribution of degrees conferred.

As Tables 10 and 11 indicate, 75 percent of the undergraduate degrees were produced by public institutions—a proportion quite consistent with the proportion of undergraduate FTE enrollment in public institutions (78 percent). Public institutions also produced 60 percent of the graduate degrees and 41 percent of degrees awarded in a first professional field.

At the baccalaureate degree level, the mix of programs in which degrees were awarded was quite similar in public and private institutions, although public institutions awarded a higher proportion of baccalaureate degrees in education and engineering while private institutions awarded a higher proportion of degrees in the social sciences. At the master's degree level, the major difference between public and private institutions was in the proportion of degrees awarded in education and business—the two most prevalent programs for master's degree recipients. Public institutions awarded a third (33.3 percent) of their master's degrees in education and 16 percent in business. Private institutions awarded 34 percent of their master's degrees in business and 17 percent in education.

At the doctoral degree level, education was the single largest program for both public (25 percent of doctoral degrees) and private (16 percent) institution degree awards. Other program areas with significant (10 percent or more of doctoral degrees conferred) concentrations of graduates were the life sciences (12 percent) and physical sciences (11 percent) in public institutions and philosophy and religion (13 percent), psychology (12 percent), and engineering (11 percent) in private institutions.

Degrees and other formal awards below the baccalaureate degree (Table 11) were generally concentrated in three program areas in both public and private institutions—business (26 percent), health (19 percent) and liberal or general studies (20 percent).

As noted previously, private institutions awarded more first-professional

degrees than public institutions, primarily because they award degrees in theological studies—a program area that is generally not available in public institutions. Private institutions also awarded more degrees in law (23,000) than publics (14,000), but public institutions awarded more degrees (10,000) in medicine than private institutions (6000) (Table 12).

—Indexes are based on U.S. average of 100.

The reader is advised of the following conditions reported by Arkansas about its data.

- 1. Finance data include the teaching hospital of the University of Arkansas Medical Sciences Campus. Applicable to the public doctoral with medical sector for Tables 5, 6, 7, 8, and 9.
- 2. Finance data include the System Administration, the Agricultural Experiment Station, the Cooperative Extension Service, the Archaeological Survey, and the Graduate Institute of Technology of the University of Arkansas Main Campus. Applicable to the public doctoral without medical sector for Tables 5, 6, 7, 8, and 9.

—Indexes are based on U.S. average of 100.

California

The reader is advised of the following conditions reported by California about its data.

Data for San Diego State and San Francisco State are included with public doctoral without medical level institutions. However, the doctoral programs for these two institutions were jointly administered with the University of California. San Diego State and San Francisco State are not traditionally considered doctoral level institutions. Applicable to the public doctoral without medical sector for Tables 1 through 9.

114

The reader is advised of the following conditions reported by Connecticut about its data.

Expenditures from general fund appropriations do not include fringe benefit expenses. These costs are paid by another State agency. Also does not include expenses of the central administrative offices of State universities, regional community colleges, and State technical colleges. Applicable to the public sector for Tables 7 and 9.

262

Cas:

The reader is advised of the following conditions reported by Hawaii about its data.

Public institutions deposit tuition revenues into the State general fund for reallocation. Revenues listed under tuition and fees in public institutions represent revenues from fees only. Revenues from State and local government appropriations include actual appropriations and the reallocated tuition revenues. Applicable to the public sector for Tables 5 and 8.

Illinois

The reader is advised of the following conditions reported by Illinois about its data.

- 1. Those doing trend analysis should note that the data for public 2-year institutions excludes the Chicago Urban Skills Institute. Applicable to the public 2-year sector for Tables 1 through 9.
- 2. Tuition are rees revenue is initially deposited in the State Income Fund and then appropriated to the public 4-year and above institutions. Applicable to the public 4-year and above sector for Tables 5 and 8.
- 3. Includes institutional support expenditures for the University of Illinois Central Administration, although central office expenditures for three other public systems in Illinois are not included. Applicable to the public doctoral with medical sector for Tables 7 and 9.
- 4. Revenues do not include funds appropriated in FY 1985 to other State agencies for unemployment insurance, workmen's compensation, and health and life insurance of higher education employees. In other States, these funds are included in higher education appropriations. Applicable to the public sector for Tables 5 and 8.

The reader is advised of the following conditions reported by Iowa about its data.

Legally, the State considers Ellsworth Community College and Marshalltown Community College as the two campuses of the Iowa Valley. Community College, although they are reported to HEGIS separately and have been included separately in this report. Applicable to the public 2-year sector for Table 3.

Maryland

The reader is advised of the following conditions reported by Maryland about its data.

The University of Maryland University College, included in the public masters sector of Tables 1 through 9, has a worldwide program and receives no State appropriations. The enrollment (Tables 1, 2, and 3), degree (Tables 10, 11, and 12), and faculty (Table 4) data in this report reflect only that portion of the University College program offered in Maryland. The expenditures (Table 7), revenues (Tables 5 and 6), and financial indicators (Tables 8 and 9) data include data from the entire worldwide operation of the University College. This results in a significant overstatement of expenditures and revenues per student at public master's level institutions in Maryland.

Individuals who need further information about the Maryland data should contact Lucie Lapovsky at the State Board for Higher Education, 16 Francis Street, Annapolis, Maryland 21401.

. * (*) \$ 3

The reader is advised of the following conditions reported by Michigania about its data.

- 1. Shaw College closed at the end of the 1982-83 school year. However, imputed data for Shaw College were included in the private baccalaureate sector for all tables except Tables 11 and 12.
- 2. State and local government appropriations include \$32.9 million in Table 5 earmarked for the Cooperation Extension and the Agricultural Experiment Station at Michigan State University. These revenues do not fund student activities and inflate the revenues per FTE student in Table 8 for public 4-year doctoral with medical institutions. Applicable to the public 4-year doctoral with medical sector for Tables 5 and 8.

NOTE.—Indexes are based on U.S. average of 100.

NOTE.—82 percent of total less-than-4-year degrees were associate degrees.
—indexes are based on U.S. average of 100.

Minnesota

The reader is advised of the following conditions reported by Minnesota about its data.

- 1. This category excludes 27 postsecondary vocational technical institutes in Minnesota that enrolled approximately 40,000 full-time equivalent students during FY 1985. Applicable to the public 2-year sector for Tables 1 and 2.
- 2. This caregory excludes 27 postsecondary vocational technical institutes in Minnesota that enrolled approximately 40,000 full-time equivalent students during FY 1985. Consequently, comparisons on a per capita basis are inappropriate. Applicable to the public 2-year sector for Table 3.
- 3. This category excludes 27 postsecondary vocational technical institutes in Minnesota that employed approximately 2,000 full-time equivalent faculty during FY 1985. Applicable to the public 2-year sector for Table 4.
- 4. This category excludes 27 postsecondary vocational technical institutes in Minnesota that had approximately \$177 million in revenues during FY 1985. Applicable to the public 2-year sector for Tables 5 and 7.
- 5. This category excludes 27 postsecondary vocational technical institutes in Minnesota that had approximately \$12 million in Federal revenues during FY 1985. Applicable to the public 2-year sector for Table 6.
- 6. This category excludes 27 postsecondary vocational technical institutes in Minnesota that had approximately \$177 million in revenues, enrolled approximately 40,000 full-time equivalent students, and employed approximately 2,000 full-time equivalent faculty during FY 1985. Consequently, comparisons on a per capita basis are inappropriate. Applicable to the public 2-year sector for Table 8.
- 7. This category excludes 27 possescondary vocational technical institutes in Minnesota that had approximately \$177 million in expenditures, enrolled approximately 40,000 full-time equivalent students, and employed approximately 2,000 full-time equivalent faculty during FY 1985. Applicable to the public 2-year sector for Table 9.
- 8. This category excludes 27 postsecondary vocational technical institutes in Minnesota. Over one-half of these institutes now offer, or have plans to offer, associate degrees. Applicable to the public 2-year sector for Table 11.

NOTE.-Indexes are based on U.S. average of 100.

NOTE.—80 percent of total less-than-4-year degrees were associate degrees.
—Indexes are based on U.S. average of 100.

The reader is advised of the following conditions reported by New York about its data.

- 1. All of the average salaries shown may be understated because City-University payments for 1984-85 salary increases were not made until after the HEGIS data collection had been completed. Applicable to the public sector for Table 4.
- 2. Educational and general mandatory transfers may be understated because the City University 4-year and 2-year colleges and the State University (SUNY) community colleges did not report capital debt service on the HEGIS form. Applicable to the public sector for Table 7.

NOTE 94 percent of total less than 4 year degrees were associate degrees. Indexes are based on U.S. average of 100.

Oregon

The reader is advised of the following conditions reported by Oregon about its data.

- 1. Data for Oregon State University are included with public doctoral with medical level institutions because of Oregon State's veterinary medicine program. However, that program is a cooperative one with Washington State University. The medical part of the program is at Washington State. The Oregon State students are sent to Washington State for that part of the program. Applicable to the public doctoral with medical sector for Tables 1 through 9.
- 2. Oregon State colleges and universities and public community colleges report; for the three categories of average salary, the employee's contribution to the retirement system as a fringe benefit and not as salary. For comparative purposes, Oregon's salary data for the public colleges should be adjusted upward by 6 percent. Applicable to the public sector for Table 4.

NOTE.—Indexes are based on U.S. average of 100.

NOTE.—61 percent of total less-than-4-year degrees were associate degrees.
—Indexes are based on U.S. average of 100.
378

The reader is advised of the following conditions reported by Rhode Island about its data.

Roger Williams College in Bristol, Rhode Island, has a small branch campus in Providence. Both campuses filled out separate forms for all of the HEGIS surveys involved and submitted the forms independently to the Center for Education Statistics. As a result, Roger Williams College was counted as two institutions rather than one. That affected the data for number and mean size of institutions. Applicable to the private baccalaureate sector of Table 3.

The reader is advised of the following conditions reported by Virginia about its data.

Revisions requested for the data from Virginia Commonwealth University after the database close-out indicated the following for Virginia. The educational and general revenues (Tables 5 and 8) and Federal government appropriations (Tables 5, 6, and 8) are excessively high; the educational and general expenditures (Tables 7 and 9) are excessively low. Applicable to the public doctoral with medical sector for Tables 5, 6, 7, 8, and 9 as noted above.

Individuals who need further information about the Virginia data should contact Robert D. Hix at the Council for Higher Education, James Monroe Building, 101 North Fourteenth Street, Richmond, Virginia, 23219.

NOTE.—74 percent of total less-than-4-year degrees were associate degrees.
—Indexes are based on U.S. average of 100.

42

The reader is advised of the following conditions reported by Washington about its data.

- 1. All faculty of the State community college system technically have no academic rank and are reported under "Other". It appears that a few colleges reported a total of 123 professors with an average salary of \$26,246. For consistency, these figures should be included in the "Other" category. Applicable to the public 2-year sector for Table 4 (9-month contract).
- 2. Tuition and fees revenues are collected by the State and reallocated through State appropriations. Applicable to the public sector for Table 5.

Appendix A

Institutional Classifications and Listings by State

Institutional Classifications Used In This Report:

Control of institution

Public. Includes all higher education institutions under the control of—or affiliated with—Federal, State, local, State and local, or State-related agencies.

Private. Includes all higher education institutions under the control of—or affiliated with—nonprofit, independent organizations with no religious affiliation; or nonprofit organizations with a religious affiliation (including Catholic, Jewish, Protestant, or other).

Level of institution

4-year and above includes the following categories:

Doctoral. Any institution that awarded a doctoral degree or first-professional degree during academic year 1984–85. First-professional degree programs include chiropracty, dentistry, law, medicine, optometry, osteopathy, pharmacy, podiatry, theology, and veterinary medicine.

Doctoral with medical. Any doctoral institution that awarded a degree in dentistry, medicine, osteopathy, or veterinary medicine during academic year 1984-85.

Doctoral without medical. Any doctoral institution that did not award a medical degree (see above) during academic year 1984-85.

Master's. Any institution that awarded postbaccalaureate degrees or certificates below the doctorate during academic year 1984-85 (includes masters degrees, postbaccalaureate certificates, and postmasters certificates).

Baccalaureate. Any institution whose highest degree awarded in the academic year 1984-85 was a baccalaureate degree.

2-year. Any institution that awarded an associate's degree, a certificate, or diploma in a program of less than four years in length during academic year 1984-85.

The list that follows includes all campuses used in this report by institutional classification and State. The States are shown in alphabetical order. The institutions listed include all campuses that reported data for the HEGIS Institutional Characteristics Survey to CES in 1984.

Sources of Data and Definitions of Terms

Appropriations Data (Table Y)

Source: Center for Higher Education, College of Education, Illinois State University. *Grapevine* summary tables for 1985, 1986, and 1987, Normal, Illinois.

Description of survey and methodology. Data were collected for sums of State appropriated (not expended) funds from tax dollars for annual operating expenses of higher education immediately after legislative appropriations were enacted for each of the States.

Data were collected for sums appropriated for 1) Statewide coordinating boards or governing boards (for board expenses or for allocation by the board to other institutions, or both); 2) State aid to local public community colleges; 3) operation of State-supported community colleges; 4) operation of vocational technical 2-year colleges or institutions which are predominantly for high school graduates and adult students; 5) higher education, but appropriated to another State agency (Examples: funds for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education for disbursement from there); 6) State scholarships or other student financial aid; and 7) private institutions of higher education at all levels. Excluded were appropriations for capital outlays and debt service; and appropriations of sums derived from Federal sources, student fees, auxiliary enterprises, and other non-tax sources.

The survey form was sent to a higher education fiscal agency in each of the 50 States. Reports were received from all of the States for the 1984-85, 1985-86, and 1986-87 surveys.

Definition of terms

Appropriation of State tax funds for operating expenses of higher education. See above explanation of data collected under "description of survey and methodology."

Index. See definition on page 513.

Per capita. The total population of individuals in a State 18 years of age and older divided by 1,000.

Source: CES. HEGIS XX: Degrees and Other Formal Awards Conferred Between July 1, 1984 and June 30, 1985. Washington, D.C.: CES, 1985.

Description of survey and methodology. Data were collected on the number of postsecondary certificates for programs of less than 1 year, postsecondary certificates for programs of 1 but less than 4 years, associate's degrees, bachelor's degrees, master's degrees, doctor's degrees, and first-professional degrees conferred by institutions of higher education. The universe included 3,337 institutions of higher education and 42 rabbinical schools which do not confer formal awards. The survey form was sent to 3,379 institutions of higher education and their branches. Reports were received from 3,019 institutions—a response rate of 89 percent. Imputations were made for an additional 276 nonrespondent institutions based upon their responses to the 1983–84 survey. The remaining 42 institutions could not be imputed because the institutions were new to the HEGIS universe in 1983–84 or 1984–85 and did not respond to either survey. Those institutions are included on the file with "zero" degrees.

Definition of terms

Bachelor's degree (Table 10). Normally requires at least 4 but not more than 5 years of full-time college-level work. Includes all bachelor's degrees conferred in a cooperative or work-study plan or program. Includes bachelor's degrees in which the normal 4 years of work is completed in 3 years.

Control of institution (Tables 10, 11, and 12). See definition on page 477.

Degrees of 4 or more years (Table 10). Includes earned certificates or diplomas below the baccalaureate, as well as associate's, bachelor's, doctor's, and first-professional degrees.

Doctor's degree (Table 10). The doctor's degree classification includes such degrees as Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and the Ph.D. Degree in any field whether Agronomy, Food Technology, Education, Engineering, Public Administration, Ophthalmology, Radiology, etc.

Field of study (based upon the program codes provided in A Classification of Instructional Programs, CES, 1981, Washington, D.C.), (Tables 10, 11, and 12)

Agriculture (Tables 10 and 11). Includes Classification of Instructional Programs (CIP) 2-digit program codes 01 (Agribusiness and Agricultural Production), 02 (Agricultural Science), 03 (Renewable Natural Resources) and 31 (Parks and Recreation).

All Other (Table 10). Includes CIP 2-digit program codes 04 (Architecture and Environmental Design), 05 (Area and Ethnic Studies), 12 (Consumer, Personal, and Miscellaneous Services), 21 (Industrial Arts), 22 (Law), 24 (Liberal/General Studies), 25 (Library and Archival Sciences), 28 (Military Sciences), 29 (Military Technologies), 30 (Multi/Interdisciplinary Studies), 32 (Basic Skills), 33 (Citizenship/Civic Activities), 34 (Health-Related Activities), 35 (Interpersonal Skills), 36 (Leisure and Recreational Activities), 37 (Personal Awareness), 41 (Science Technologies), 46 (Construction Trades), 47 (Mechanics and Repairers), 48 (Precision Production), and 49 (Transportationa and Material Moving).

All Other (Table 11). Includes CIP 2-digit program codes 04 (Architecture and Environmental Design), 05 (Area and Ethnic Studies), 12 (Consumer, Personal, and Miscellaneous Services), 16 (Foreign Languages), 21 (Industrial Arts), 22 (Law), 23 (Letters), 25 (Library and Archival Sciences), 26 (Life Sciences), 27 (Mathematics), 28 (Military Sciences), 29 (Military Technologies), 30 (Multi/Interdisciplinary Studies), 32 (Basic Skills), 37 (Personal Awareness), 38 (Philosophy and Religion), 39 (Theology), 40 (Physical Sciences), 41 (Science Technologies), and 42 (Psychology).

Business (Tables 10 and 11). Includes CIP 2-digit program codes 06 (Business and Management), 07 (Business and Office), and 08 (Marketing and Distribution).

Chiropractic (Table 12). Includes CIP 6-digit program code 18.0301 (Chiropractic).

Communications (Tables 10 and 11). Includes CIP 2-digit program codes 09 (Communications) and 10 (Communication Technologies).

Computer and Information Sciences (Tables 10 and 11). Includes CIP 2-digit program code 11 (Computer and Information Sciences).

Dentistry (Table 12). Includes CIP 6-digit program code 18.0401 (Dentistry, General).

Education (Tables 10 and 11). Includes CIP 2-digit program code 13 (Education).

Engineering (Tables 10 and 11). Includes CIP 2-digit program codes 14 (Engineering) and 15 (Engineering and Engineering-Related Technologies).

Foreign Languages (Table 10). Includes CIP 2-digit program code 16 (Foreign Languages).

Health (Tables 10 and 11). Includes CIP 2-digit program codes 17 (Allied Health) and 18 (Health Sciences).

Home Economics (Tables 10 and 11). Includes CIP 2-digit program codes 19 (Home Economics) and 20 (Vocational Home Economics).

Law (Table 12). Includes CIP 6-digit program code 22.0101 (Law).

Letters (Table 10). Includes CIP 2-digit program code 23 (Letters).

Liberal (General Studies) (Table 11). Includes CIP 2-digit program code 24 (Liberal/General Studies).

Life Sciences (Table 10). Includes CIP 2-digit program code 26 (Life Sciences).

Medicine, General (Table 12). Includes CIP 6-digit program code 18.1001 (Medicine, General).

Optometry (Table 12). Includes CIP 6-digit program code 18.1201 (Optometry).

Osteopathic Medicine (Table 12). Includes CIP 6-digit program code 18,1301 (Osteopathic Medicine).

Other (Table 12). Includes CIP 6-digit program code 80.9999 (Specify: The "Other" category is used for first-professional degrees within the 10 professions other than those specifically named in connection with those professions).

Pharmacy (Table 12). Includes CIP 6-digit program code 18.1401 (Pharmacy).

Philosophy and Religion (Table 10). Includes CIP 2-digit program codes 38 (Philosophy and Religion) and 39 (Theology).

Physical Sciences (Table 10). Includes CIP 2-digit program code 40 (Physical Sciences).

Podiatry (Table 12). Includes CIP 6-digit program code 18.1501 (Podiatry).

Psychology (Table 10). Includes CIP 2-digit program code 42 (Psychology).

Public Affairs and Protective Services (Tables 10 and 11). Includes CIP 2-digit program codes 43 (Protective Services) and 44 (Public Affairs).

Social Sciences (Table 10). Includes CIP 2-digit program code 45 (Social Sciences).

Theological Studies (Table 12). Includes CIP 6-digit program code 39.0601 (Theological Studies).

Trade and Industrial (Table 11). Includes CIP 2-digit program codes 46 (Construction Trades), 47 (Mechanics and Repairs), 48 (Precision Production) and 49 (Transportation and Material Moving).

Veterinary Medicine (Table 12). Includes CIP 6-digit program code 18.2401 (Veterinary Medicine).

Visual and Performing Arts (Tables 11 and 12). Includes CIP 2-digit program code 50 (Visual and Performing Arts).

First-professional degree (Table 12). See definition on page 515.

Index (Tables 10, 11, and 12). A State's index for a particular statistic is computed by dividing the State's average or numerical value for the statistics by the U.S. average or numerical value for the statistics and multip.jing by 100.

Less than 4-year degrees (Table 11).

a) Postsecondary certificates or diplomas (less than 1 year). A program that would be completed in less than 1 academic year (2 semesters or 3 quarters)

by a student enrolled full-time, as full-time is defined by the reporting institution, regardless of how long the student has attended the institution;

- b) Postsecondary certificates or diploma (1 but less than 4 years). A program that takes more than 1 academic year by a student enrolled full-time, institutionally defined, and in which the completer did not receive, nor is eligible for, an associate's degree or a bachelor's degree;
- c) Associate's Degree. A degree normally given after at least 2 but less than 4 years of full-time college work.

Master's degree (Table 10). The master's degree in liberal arts and sciences is the degree customarily granted upon successful completion of at least 1 but not more than 2 full-time academic years of work beyond the bachelor's degree.

Private (Tables 10, 11, and 12). See definition on page 477.

Public (Tables 10, 11, and 12). See definition on page 477.

Expenditures 1984–85 (Table 7)

Source: CES, HEGIS XX: Financial Statistics of Institutions of Higher Education for Fiscal Year 1985. Washington, D.C.: CES, 1985.

Description of survey and methodology. Data for FY 1985 educational and general expenditures by function were collected from every 2- and 4-year institution of higher education in the HEGIS universe. The survey form was sent to 3,379 institutions of higher education and their branches. Reports were received from 2,959 institutions—a response rate of 87.6 percent. Imputations were made for an additional 370 nonrespondent institutions based upon their responses to the FY 1984 survey. The remaining 50 schools could not be imputed because they were new to the HEGIS universe in 1983–84 or 1984–85 and did not respond to either survey.

Definition of terms

Academic support. Includes expenditures for the support services that are an integral part of an institution's primary missions of instruction, research, or public services. Includes expenditures for museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration and personnel development, and course and curriculum development.

Control and level of institution. See definition on page 477.

Educational and general (E&G) expenditures. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations. Pell grants are excluded.

Educational and general (E&G) mandatory transfers. Mandatory transfers from current funds are those that must be made in order to fulfill a binding legal obligation of the institution. Includes mandatory debt-service provisions relating to academic and administrative buildings including amounts set aside for debt retirement and interest; and required provisions for renewal and replacements to the extent they are not financed from other sources.

Index. See definition on page 513.

Institutional support. Includes expenditures for the day-to-day operational support of the institution (except expenditures for physical plant operations). Also includes expenditures for administrative services, executive direction and planning, legal and fiscal operations, and community relations.

Instruction. Includes instruction expenditures of the colleges, schools, departments, and other instructional divisions of the institution; and expenditures for departmental research and public service that are not separately budgeted. Also includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (for example, academic deans). This category includes the following: general academic instruction; occupational and vocational instruction; special-session instruction; community education; preparatory and adult basic education; and remedial and tutorial instruction conducted by the teaching faculty for the institution's students.

Libraries. Includes current operating expenditures for libraries. Does not include capital expenditures.

Operation and maintenance of plant. Includes all expenditures for operations established to provide service and maintenance related to campus

grounds and facilities used for educational and general purposes. Does not include expenditures made from the institutional plant funds accounts.

Public service. Includes all funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services that are beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community. Also includes expenditures for community services and cooperative extension services.

Research. Includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. Does not include nonresearch projects (such as training programs).

Scholarships and fellowships. This category applies only to moneys given in the form of outright grants and trainee stipends to individuals enrolled in formal coursework, either for credit or not. Aid to students in the form of tuition or fee remissions is included. Excludes those remissions which are granted because of faculty or staff status. These are charged to staff benefits. Does not include College Work Study program expenses. Pell Grants are included for this report.

Student services. Includes funds expended for admissions, registrar activities, and activities whose primary purpose is to contribute to students' emotional and physical well-being and to their intellectual, cultural and social development outside the context of the formal instruction program. Examples are career guidance, counseling, financial aid administration, student health services (except when operated as a self-supporting auxiliary enterprise). Includes the administrative allowance for Pell Grants.

Faculty 1984-85 (Table 4)

Source: CES, HEGIS XIX: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1984-85. Washington, D.C.: CES, 1984.

Description of survey and methodology. Data were collected on instructional faculty employed (including those under contract but not in the payroll system) by higher education institutions as of October 1, 1984. Only full-time instructional faculty on 9- and 12-month salary contracts are included in the

survey. The survey form was sent to 3,379 institutions of higher education and their branches. Reports were received from 2,915 institutions—a response rate of 86 percent. Salary data omitted by respondents were not imputed. No data of any kind were imputed for the 464 nonrespondents to the survey because the survey form used in 1984–85 was significantly different from the one used in 1982–83, the last year data are available for this survey prior to 1984–85.

Definition of terms

Academic rank (assistant professor, associate professor, professor, and other). The academic ranks of assistant professor, associate professor, and professor are defined by the institutions. "Other" includes instructors, lecturers, and faculty with no academic rank as defined, again, by the institutions.

Control and level of institution. See definition on page 477.

Full-time Faculty. Defined as those instructional members of the Instruction/Research staff who are employed full-time (definition supplied by the institution) and whose major regular assignment is instruction, including those with released time for research. Instructional faculty on sabbatical leave are reported at their regular salaries, even though the faculty member may be receiving a reduced annuity while on leave. Replacements for those on sabbatical leave and on faculty leave without pay are not included. Full-time replacements for those on leave without pay are included. Chairmen of departments are reported (if they have no other administrative title and hold a faculty rank) at their contracted faculty salary.

Index. See definition on page 513.

Length of contract (9-month and 12-month). Salaries of faculty are reported on either a 9-month or a 12-month basis. Faculty are reported as having 9-month or 12-month salaries on the basis of their contract period, not on the basis of the number of installments in which salaries are paid. The term "9-month salary" applies to faculty who teach for two semesters, three quarters, two trimesters, two 4-month sessions or the equivalent. The term "12-month salary" applies to faculty employed for the entire year. These faculty are usually employed for 11 months of teaching with one month of vacation.

Fall Enrollment 1984 (Tables 1, 2, and 3)

Source: CES, HEGIS XIX: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1984. Washington, D.C.: CES, 1984.

Description of survey and methodology. Data were collected for full-time and part-time enrollment in the fall of 1984 by student attendance status, level of study, sex, race, and type and control of institution. The survey form was sent to 3,379 institutions of higher education and their branches. Reports were received from 3,176 institutions—a response rate of 94 percent. Imputations were made for an additional 169 nonrespondent institutions based upon their responses to the 1983 survey. The remaining 34 schools could not be imputed because they were new to the HEGIS universe in 1983–84 or 1984–85 and did not respond to either survey.

Definition of terms

Control and level of institution (Tables 1, 2, and 3). See definition on page 477.

Enrollment level (Table 1). Includes undergraduate, first-professional, graduate, and unclassified students.

First-professional (Table 1). Students enrolled in a professional school or program which requires at least 2 academic years of college work for entrance and a total of at least 6 years for a degree. Includes only students in first-professional degree programs in the field of chiropractic, dentistry, law, medicine (general), optometry, osteopathic medicine, pharmacy, podiatry, theological studies, and veterinary medicine. (See definitions of these program codes in A Classification of Instructional Programs, CES, 1981, Washington, D.C.) Students in programs requiring only 4 or 5 years beyond high school are reported as undergraduates.

First-time freshman (Table 1). Entering freshmen who have not previously attended any college. Includes students enrolled in the fall term who attended college for the first time in the summer of 1984. Also includes students who entered with advanced standing (college credits earned before graduation from high school) at the freshman level.

Full-time enrollment (Table 2). Those students whose academic load (course work or other required activity) is at least 75 percent of the institution's normal full-time load.

ERIC

Full-time equivalent (FTE) enrollment (Tables 1, 2, and 3). FTE enrollment figures are based on the number of full-time students plus an FTE of part-time students as reported by institutions. (For institutions that do not report the FTE of part-time students, FTE is calculated by dividing the number of part-time students by three).

Full-time equivalent (FTE) of part-time enrollment (Table 2). Part-time students were converted by data providers into full-time equivalents by one of the following methods:

- (1) Use of a method already employed in the institution of the data provider to compute FTEs for some other purpose;
- (2) An institution data provider could have totaled the credit hours for parttime students and divided by the normal full-time credit-hour load. The
 normal full-time credit-hour load was usually determined by dividing
 the total number of credits required for completing a program by the
 institutionally defined length of program in terms, or by the number of
 terms required of a fully engaged student to obtain such credits. Data
 providers were advised that FTE of part-time students was not the
 minimum number of credit hours required for a student to be classified
 full-time (75 percent of a normal full-time load). Therefore, the
 institution data providers divided by the normal full-time load, not by
 the minimum full-time load. For most institutions, this figure was 15
 credit-hours (not 12); and
- (3) Institutions (data providers) were advised, also, that they could assign a fractional value of full-time to each part-time student, appropriate to the institution, such as ¼, or ½. A student taking ¾ (75 percent) or more of a normal full-time load could be classified as a full-time student.

Graduate student (Table 1). Students who hold the bachelor's or first-professional degree, or equivalent, and are working toward an advanced degree.

Index (Tables 1, 2, and 3). See definition on page 513.

Mean size of institutions (Table 3). Mean size of the institutions is the total enrollment in a sector divided by the number of institutions reporting enrollment in that sector.

Other (Table 1). First-year students who entered the institution before the summer of 1984, and second-year, third-year and fourth-year and beyond students.

Per 1000 capita (Table 3). See definition on page 511.

Postbaccalaureate (Table 1). Includes first-professional and graduate students.

Unclassified (Table 1). Undergraduate and postbaccalaureate level students who are not candidates for a degree or other formal award, although taking courses for credit in regular classes with other students.

Undergraduate level. Includes, but is not limited to, undergraduates who cannot be classified by class standing; for example, new transfer students. Includes students who already have bachelor's degrees or awards below the baccalaureate degree who are taking courses at the same level or lower. Included also are "special students" and teachers taking additional undergraduate courses for certification.

Postbaccalaureate level. Includes, but is not limited to, "special" and other students taking first-professional or graduate courses but who are not working toward a degree.

First-professional students. See definition on page 515.

Undergraduate (Table 1). Students enrolled in a 4- or 5-year bachelor's degree program, in an associate degree program, or in a vocational or technical program that is normally terminal and results in formal recognition below the baccalaureate degree.

Definition of terms

Academic support (Table 9). See definition on page 513.

Control and level of institution (Tables 8 and 9). See definition on page 477.

Federal Government appropriations (Table 8). See definition on page 518.

Federal Government grants and contracts (Table 8). See definition on page 518.

Full-time equivalent (FTE) student (Tables 8 and 9). See definition on page 516.

Full-time faculty (Tables 8 and 9). See definition on page 515.

Income from private sources. (Table 8). Combines income from private gifts, grants and contracts with endowment income. (See page 518 for definitions of private gifts, grants and contracts, and page 518 for definition of endowment income.)

Index (Tables 8 and 9). See definition on page 513.

Institutional support (Table 9). See definition on page 514.

Instruction (Table 9). See definition on page 514.

Libraries (Table 9). See definition on page 514.

Pell Grant (Table 9). Includes the amount of Pell Grants disbursed by institutions.

Per 1000 capita (Table 8). See definition on page 511.

Research (Table 9). See definition on page 514.

Sales and services of auxiliary enterprises (Table 8). Includes all revenues generated by the auxiliary enterprise operations of the institution. Auxiliary enterprises are managed as essentially self-supporting activities. Examples are residence halls, food services, student health services, college unions, college stores, barber shops, etc.

Scholarships and fellowships (Table 9). See definition on page 514.

State and local government appropriations (Tables 8). See definition on page 518.

Student services (Table 9). See definition on page 514.

Tuition and fees (Table 8). See definition on page 518.

Revenues 1984–85 (Tables 5 and 6)

Source: CES, HEGIS XX: Financial Statistics of Institutions of Higher Educaton for Fiscal Year 1985. Washington, D.C.: CES, 1985.

Description of survey and methodology. See description on page 513.

Definition of terms

Control and level of institution (Tables 5 and 6). See definition on page 477.

Educational and general (E&G) revenues (Table 5). Consists of current funds revenues from Federal, State, and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other

84017

, . 'A

revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes. Pell Grants are excluded.

Endowment income (Table 5). Includes the unrestricted income of endowment and similar funds; restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Does not include capital gains or losses. Such gains when spent for current operations are treated as transfers, not revenues.

Federal Government appropriations (Tables 5 and 6). Includes dollars appropriated or made available by the Federal Government to public or private institutions of higher education for current operating expenses and not for specific projects or programs. Examples are Federal land-grant appropriations and Federal revenue sharing funds. Federal appropriations received through State channels are included in the total for Federal appropriations. Federal grants and contracts are excluded.

Federal Government grants and contracts (Tables 5 and 6). Includes revenues from Federal agencies that are for specific research projects or other types of programs such as administrative allowances for student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a Government grant or contract. Includes indirect costs recovered. Pell Grants are excluded.

Index (Tables 8 and 9). See definition on page 513.

Other (Table 5). Includes sales and services of educational activities and revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. Also includes all items or revenues not covered elsewhere. Examples are interest income and gains (net of losses) from

investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution (e.g., the sale of computer time).

Pell Grants (Table 6). Includes the amount of Pell Grants disbursed by institutions.

Private gifts, grants and contracts (Table 5). Private gifts and grants include revenues from private donors for which no legal consideration is involved. Private contracts include those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Monies received as a result of gifts, grants, or contracts from a foreign government are included, as well as the estimated dollar amount of contributed services.

State and local government appropriations (Table 5). Dollars appropriated or made available by State and local governments to public or private institutions of higher education for current operating expenses and not for specific projects or programs. Grants and contracts are excluded. Charges for room, board, and other services rendered by auxiliary enterprises are not included here.

State and local government grants and contracts (Table 5). Includes revenues from State and local government agencies which are for specific research projects or other types of programs such as student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Tuition and fees (Table 5). All tuition and mandatory fees assessed against students for current operating purposes. Includes tuition and fee remissions or exemptions even when there is no intention of collecting from the student. Includes those tuitions and fees that are remitted to the State as an offset to the State appropriation. Charges for room, board, and other services rendered by auxiliary enterprises are not included.
